

PRATT SAFETY SHOWER TEST KIT

Part No: SETESTKIT

It has been over 10 years since the introduction of the first Australian Standard AS4775 for Emergency Shower and Eyewash Equipment.

With the introduction of this Standard, it stipulated the requirement for regular testing and maintenance of this type of equipment. Pratt recognised the need for a simple kit of tools to enable in house testing of this equipment.

The Pratt Safety Shower Test Kit is still in popular demand to this day as it has become the benchmark for this type of test kit.

The kit provides the necessary equipment to perform most of the main tests and checks required, in order to comply with the Standard. Note, that the kit does not include a pressure test gauge.

Safety Shower and Eyewash Equipment provide a vital role in the initial treatment for many chemical contaminations, fire burns and freeze burns.

Whilst this equipment is required, where hazards exist, in many cases the equipment is not correctly tested and maintained to ensure the correct operation at all times. This is often the result of not having the necessary equipment, procedures and understanding to maintain the equipment. This is where the Pratt Safety Shower Test Kit can help.

The SETESTKIT Includes:

- 120L wheelie bin with sight gauge, calibrated to 5L increments and drainage valve.
- Shower test sock.
- Shower pattern test gauge.
- Eyewash pattern test gauge.
- Plastic document holder.
- Eyewash aerator removal key.
- Set of Checklist and instruction documents.
- 20L plastic receptacle.
- 10L low profile plastic tray.
- Flexible hose to connect to waste outlet.
- Pkt 10 weatherproof test tags.
- All components can be repacked into the wheelie bin for storage.

Also available is the Pratt Test Sock and Receptacle Kit if this is all you need.

Part No: SE950 (Note, this is included in the SETESTKIT)
